Abstract (en)
[origin: EP2924320A1] A transmission (30, 130, 230, 330) which includes a housing (H), a planetary gear mechanism (P1), an input shaft (N), an output shaft (T), a brake (B1) including a friction member (81), a piston member (82) pressing the friction member (81), and an actuator portion (83) applying a pressing force to the piston member (82), the brake (B1) braking a rotation of one of a sun gear (P1 s), a ring gear (P1r), and a carrier (P1c) of the planetary gear mechanism (P1), an external output gear (91) positioned between the friction member (81) and the actuator portion (83) in a direction of a rotation axis (L), the external output gear (91) provided at a member integrally rotating with the input shaft (N), and the piston member (82) including an opening portion (82c) formed over a predetermined angular range about the rotation axis (L) and within a range in the direction of the rotation axis (L) in which the external output gear (91) is disposed.
