Abstract (en)

[origin: EP2924383A1] Steam condenser with cross-flow heat exchanger, according to invention is characterized in that on the side of hood 1, sucking the air or the steam from opened furnace doors, at least one assembly socket (2), at least one front cross-flow Exchange is located, adhering to equipped with fan mixing chamber (4), which is connected with inner chamber (5) and located in common housing condensation chambers (6) with tube exchangers (61), at the same time each of cross-flow exchangers (3) consists of stock-pile of rectangular sheets (31), connected in corners by rods (32), and between sheets 31 alternatively horizontal distance strips (33) and vertical strips (34) are located, creating the space for cross flow of air and steam.
