Abstract (en)
[origin: ES2546578A1] Cooking field device. The invention relates to a cooking field device (10), in particular, to an induction cooking field device, with a variable cooking surface area (12) which is provided for heating the cooking coil (14).) placed in one or several positioning positions (16), and with one or more light sources (18) that are intended to illuminate the positioning position (s) (16). In order to provide a generic device with better properties in terms of a high constructive flexibility, it is proposed that the cooking field device (10) comprises one or more first waveguides (20) that are provided at least for driving towards the position (s) (16) the light emitted by the light source (s) (18).
