Abstract (en)

[origin: WO2014082891A1] The invention relates to a clamping closure device for ski or snowboard boots, comprising at least one clamping lever (2) and an elongated tensioning device (3). One of the ends (2') of the clamping lever (2) is hinged to a support part (4) provided for fixing to the shoe, and one end (3') of the elongated tensioning device (3) is connected to the clamping lever (2). In a particularly advantageous manner, the other elongated tensioning device (3) end (3'') opposite the clamping lever (2) is connected to an eccentric adjusting device (5) to be fixed to the shoe, or the elongated tensioning device (3) is guided via an eccentric adjusting device (5) to be fixed to the shoe, wherein the eccentric adjusting device (5) is designed to finely adjust the clamping force of the clamping closure device (1).
