Abstract (en)
[origin: WO2014084838A1] An oral care implement is provided. The implement comprises: a head having a surface from which a cleaning element extends, the cleaning element having a distal end furthest from the surface of the head; and a handle connected to the head, the handle comprising a grip structure forming at least a portion of an exterior surface of the handle; wherein the grip structure is rotatable relative to the head about an axis that passes through the cleaning element at a point on the cleaning element between the surface of the head and the distal end of the cleaning element.
