Abstract (en)
[origin: WO2014083452A1] The invention relates to a kindling (1, 11) for starting a fire, in particular in coal-burning stoves, which comprises a combustible material (9) and longitudinal elements made from a combustible material in the form of shapes (2, 12). The shapes (2, 12) have gaps/ spaces between them (3, 13) and are arranged next to one another around an axis (0) and mutually connected, for example by means of a tray (4, 14) and which form an outline of a side surface of a spatial solid, preferably resembling a truncated cone. First ends (A) of the shapes (2, 12) form the base of the solid and second ends (B) of the shapes (2, 12) form an opening (6, 16) of the spatial solid from the top.
