Abstract (en)

[origin: WO2014083415A1] Support and actuation device for sliding doors, in particular for wardrobes, the doors of which (6) are made of a type slidable in an alternate longitudinal direction along upper and lower rectilinear guides members, that are applied respectively in the ceiling (10) and the bottom (11) of the related wardrobe, and such doors (6) are actuated in alternate longitudinal sliding directions, in position which are coplanar to each other, from the opened position to closed position thereof, and vice- versa. Device comprising a first unit of upper component parts (14), a second unit of upper component parts (15), both applied on to the ceiling (10) and arranged approached to each other; and lower component parts (16), applied on to the flat bottom (11), wherein said second unit (15) is constituted by a sliding truck (45), and that is movable in the direction of the wardrobe depth, with movements in synchronism with the movements of the lower component parts (16), for shifting the doors (6) in the re-entering closing position to the extracted opening position thereof, and vice- versa, wherein the doors (6) may be slide in the alternate longitudinal direction.
