Abstract (en)  
[origin: CA2891791A1] The present invention relates to a contact lug (6; 14) for electrically conductively connecting at least two components (7, 8; 12, 13), wherein the contact lug (6; 14) is designed to apply a contact pressure to at least one of the components (7, 8; 12, 13), said contact pressure being exerted by elastic deformation of the contact lug (6; 14), wherein the contact lug (6; 14) is at least partially formed from a bimetal in such a way that an increase in the temperature of this bimetal leads to an increase in the contact pressure.
