Abstract (en)
[origin: WO2015150039A1] The invention relates to a vacuuming apparatus having a vacuum cleaner, a suction hose which is connected to the housing of the vacuum cleaner, and a filter bag, wherein the cylinder-type vacuum cleaner has a motor/fan unit which is designed in such a way that the average electrical input power of said motor/fan unit lies between 1000 W and 200 W and a negative pressure in the measurement chamber at panel 6 of greater than 12.5 kPa and a negative pressure in the measurement chamber at panel 8 of greater than 4.0 kPa result at an average electrical input power of between 1000 W and 800 W, a negative pressure in the measurement chamber at panel 6 of greater than 10.0 kPa and a negative pressure in the measurement chamber at panel 8 of greater than 3.4 kPa result at an average electrical input power of between 799 W and 600 W, a negative pressure in the measurement chamber at panel 6 of greater than 7.0 kPa and a negative pressure in the measurement chamber at panel 8 of greater than 2.5 kPa result at an average electrical input power of between 599 W and 400 W, a negative pressure in the measurement chamber at panel 6 of greater than 4.0 kPa and a negative pressure in the measurement chamber at panel 8 of greater than 1.4 kPa result at an average electrical input power of between 399 W and 200 W, and wherein the suction hose has an average cross-sectional area of at least 9.5 cm², in particular at least 11 cm² or 13 cm², and the filter bag is composed of nonwoven material.
