Abstract (en)

An object is to provide an electrical-component attachment structure for a forklift whereby electrical components around an engine is concentrated in a single place, so that it possible to prevent an electrical harness from contacting the engine and facilitate maintenance of the electrical components. An electrical-component attachment structure for a forklift 1 includes a pair of right and left side frames 21, a pair of right and left side covers 26 disposed so as to face an engine and a plurality of devices for the forklift disposed between the pair of side frames 21, the side covers being erected on upper surfaces of the pair of side frames 21, a front cover 25 for closing a front end side of the side covers 26, mounted to the side frames removably, and an engine hood 24 covering an upper end of an engine room ER surrounded by the side covers 26 and the front cover 25. The front cover includes a side to which a plurality of kinds of electrical components R for operating the forklift 1 is attached, the side being adjacent to the engine room ER.
