Abstract (en)  
A multi-walled plate material comprises a first plate body (10) and a second plate body (20) which are separated from each other by an intermediate cavity (15). The cavity is sealed at an outer end with a breathing sealing tape (30) which is at least substantially dust-tight but water vapour-permeable. The sealing tape comprises a micro-porous carrier (31) which is dust-tight for particles from a first size and is covered with a filter layer (32). The filter layer (32) comprises a breathing membrane wall which is at least water vapour-permeable but dust-tight for particles from a second size, which second size is smaller than the first size. The filter layer extends at least over the cavity opening (16).
