Abstract (en)

[origin: EP2927604A1] Device for height adjustment (1) of a household appliance (2) comprising a sliding profile (3), a support profile (4), a rod (5) and a locating means (6), wherein the sliding profile (3) is attachable to a surface (8) of the appliance (2), and, wherein the support profile (4) is for resting the device (1) on a firm base (7), wherein the support profile (4), the sliding profile (3) and the rod (5) are arranged such that a main section (9) of the sliding profile (3) is parallel to a main section (22) of the support profile (4), and wherein the rod (5) is located between the sliding profile (3) and the support profile (4), parallel to the main section (9) of the sliding profile (3) and the main section (22) of the support profile (4), the rod (5) forming an axis in its longitudinal dimension perpendicular to the firm base (7), and wherein an operation of said locating means (6) causes a linear motion of the main section (9) along the axis, wherein said operation causes a gliding motion of the main section (9) on and alongside the main section (22) along the axis.
