Abstract (en)
[origin: EP2927631A1] The invention relates to a heat exchanger between a first fluid and a second fluid, said heat exchanger comprising a core (1) made of stacked plates (3) defining flow passages for said first fluid and said second fluid to have both fluids exchanging heat, said heat exchanger further comprising a receiver (11) for said first fluid, said heat exchanger being configured so that said first fluid flows successively through a first zone (13) of the core, said receiver (11) and a second zone (15) of the core, said receiver (11) being located on a same side (17) of the core than ports through which said first and/or second fluids enter and/or exit said core.
