Abstract (en)
[origin: WO2014086912A1] The invention relates to a reaction vessel (1), comprising a first subdivision (6) and a second subdivision (7), wherein the first subdivision (6) is separated from the second subdivision (7) in a first state of the reaction vessel (1) and the first subdivision (6) is connected to the second subdivision (7) in a second state. A transition can be made from one of the two states to the other by means of the influence of a magnetic field.
