Abstract (en)

[origin: WO2015124205A1] The invention relates to a band finishing apparatus (10) comprising at least one finishing band (12) and at least one blocking device (52) which, in a blocking position, presses two effective portions of the at least one finishing band (12) against one another and prevents the at least one finishing band (12) from moving, and, in a non-blocking position, allows the at least one finishing band (12) to move. The invention further relates to a method for controlling the movement of at least one finishing band (12).
