Abstract (en)  
[origin: WO2014086873A1] In order to provide a handheld grinder that makes it possible to perform grinding easily, efficiently and with as little fatigue as possible, said grinder comprising a holding device for holding the grinder, a drive motor and a tool head, wherein the holding device comprises a substantially tubular rod which comprises a proximal end and a distal end, wherein the drive motor is arranged at the proximal end and wherein the tool head is arranged at the distal end, and said grinder comprising a transmission shaft, which connects the drive motor to a tool holder of the tool head for the transmission of the torque and at least part of which runs within the tubular rod, it is proposed that a motor shaft axis of rotation of the drive motor is aligned transversely, in particular obliquely, in relation to a longitudinal axis of the tubular rod.
