Abstract (en)
[origin: WO2014087065A1] Motor vehicle (10) comprising a bodywork (12) determining a cabin (14) in which there are at least one driver seat (22) and one front passenger seat (23) arranged across the width in substantially one row. The vehicle (10) comprises a median longitudinal axis (10L) passing substantially through the middle of the bodywork (12) thereby determining a driver-side cabin half (14C) and a passenger-side cabin half (14P). The driver seat (22) is off-centred inboard in the driver-side cabin half (14C), toward the median longitudinal axis (10L). The front passenger seat (23) is more or less centred in the passenger-side cabin half (14P). In that way, the driver seat (22) and the passenger seat (23) are arranged asymmetrically about said median longitudinal axis.
