Abstract (en)  
[origin: WO2014086920A1] An apparatus (1) for removing liquids from deformable containers (10), with a first holding device (2) for holding a first region (10a) of a container (10), with a second holding device (4) for holding a second region (10b) of the container (10), wherein said second region (10b) is spaced apart from the first region (10a), with a removal device (12) for removing liquid from the container, and with a driving device (8) which moves the second holding device (4) in a predetermined direction of movement (L) with respect to the first holding device (2). According to the invention, the removal device (12) is arranged removably on the apparatus (1), and at least one element of the removal device (12) is designed as a disposable element.
