Abstract (en)

[origin: WO2014086547A1] The invention relates to an integrated system, comprising a system for the electrothermal production of ethyne and a separating device for separating ethyne from the reaction mixture of the electrothermal production of ethyne obtaining at least one gas stream containing hydrogen and/or hydrocarbons. The integrated system has a device for introducing a gas into a natural gas grid, to which a gas stream containing hydrogen and/or hydrocarbons is fed from the separating device by way of at least one line. Said integrated system enables a flexible use of electricity by way of a method in which a gas stream containing hydrogen and/or hydrocarbons is fed from the separating device into a natural gas grid, and subject to the power supply, the quantity and/or the composition of the gas stream supplied to the natural gas grid is modified.
