Abstract (en)
[origin: WO2014090231A1] The invention relates to a pedestal bearing housing with a housing lower part and a housing upper part and a bore, which is formed by the housing lower part and the housing upper part, for receiving a bearing, by the housing lower part and the housing upper part each forming a circumferential section of the bore, and with a standing surface formed on a lower side of the housing lower part. According to the invention, it is provided that the lower side has a recess interrupting the standing surface, wherein the recess is described by an exclusively curved profile in a sectional illustration of the pedestal bearing housing perpendicular to a centre axis of the bore.
