Abstract (en)

[origin: WO2014090453A1] A tubular device (30; 30a) for connecting to a shaft (20) is proposed so that a torque can be transmitted between said tubular device (30; 30a) and said shaft (20). The tubular device (30; 30a) has a hollow accommodating region (38) for accommodating a first bearing region (46) of the shaft (20). The accommodating region (38) has at least a first contact surface (72) for coming into contact at least radially with at least the first contact region (46) of the shaft (20). The tubular device (30; 30a) has at least one torque-transmitting section which is provided for engaging with at least one torque-transmitting section (50.1, 50.2, 50.3, 50.4) of the shaft (20). The at least one torque-transmitting section of the tubular device (30; 30a) is at least one elevation (39.1, 39.2, 39.3, 39.4) which is provided immovably on the tubular device (30; 30a) and which projects from the contact surface (72) into the hollow accommodating region (38).
