Abstract (en)
[origin: WO2014090744A1] The invention relates to a recessed luminaire, which has a mounting frame (2) for mounting in a mounting opening of a ceiling or a wall, and also a retaining element (3), which is arranged on the mounting frame (2) in a retained manner. The recessed luminaire also has two latching connections (R, R '), the recessed luminaire being designed in such a manner that the retaining element (3) is arranged on the mounting frame (2) via the at least two latching connections (R, R ') in a retained manner. The latching connections (R, R ') enable the retaining element (3) to be mounted to the mounting frame (2) in a particularly easy manner. The mounting thus created is particularly suitable for a gimbal.
