Abstract (en)
[origin: WO2014086449A1] The invention relates to a method for transmitting telematics data from a lorry (1), consisting of a towing vehicle (2) and at least one trailer vehicle (6), to a vehicle-remote telematics portal (27), and also to a system and apparatuses for carrying out the method. In order to be able to set up and operate the method, the system and the apparatuses inexpensively, provision is made for the telematics data from the at least one trailer vehicle (6) to be transmitted via a cable connection (20, 32) to the towing vehicle (2) and to be sent from the towing vehicle (2), together with the telematics data from the towing vehicle (2), to the vehicle-remote telematics portal (27). Only the towing vehicle (2) has an electronic telematics constroller (21), and the cable connection (20, 32) is used as a PLC line in order to transmit the telematics data from the trailer vehicle (6) to the towing vehicle (2) without the need for additional cable connections.
