Abstract (en)

[origin: CA2887423A1] The invention relates to a blade mount for a cutting machine, in particular for a food slicing machine, comprising a contact surface for a blade, a mount section for the blade projecting axially from the contact surface and at least one torque transmission element which projects axially from the contact surface, which is radially spaced apart from the mount section, which engages into the blade and in which a mount is formed for a fastening means for fastening the blade to the blade mount. The invention further relates to a blade matched thereto, to a handling apparatus for assembling the blade at the blade mount and to a system of blade mount, blade and handling apparatus.
