Abstract (en)
  A hearing aid comprising a hearing aid housing (1) with a receiver (5) having a substantially plane side face (12) with a sound outlet opening, and
  where the hearing aid further comprises a filter (11), e.g. a cerumen filter, the hearing aid housing (1) comprising an outer surface and an internal
  cavity adapted for containing the receiver (5) and a filter socket (6) arranged in the outer surface, the filter (11) being releasably attached to the
  filter socket (6), wherein a sound channel (10) is arranged between the receiver (5) and the filter socket (6) and being adapted for directing sound
  from the receiver (5) to the filter socket (6), the filter socket (6) defining a direction of detachment (A) of the filter (11) from the filter socket (6) and
  the receiver (5) defining a primary direction of a sound outlet (B) being perpendicular to the substantially plane side face (12) and the direction of
  detachment (A) is arranged obliquely with respect to the primary direction of the sound outlet (B).
