Abstract (en)
[origin: WO2014122062A1] The invention relates to a water amusement ride, comprising at least one water vehicle (20), which can be moved in a body of water and which comprises seats (21) for accommodating passengers. A platform (10) is provided, which extends out of the water surface (4) of the body of water in an idle state of the water amusement ride (1) and is beneath the water surface in an operating state, and a platform carrier (50) is provided, which lifts the platform (10) out of the water surface (4) in the idle state. According to the invention, the platform carrier (50) and/or the platform (10) comprises at least one floating body (55). Advantage: the switch to the idle state (and possibly also back to the operating state) can be completed more quickly and with lower force consumption and energy consumption in comparison with a traditional water amusement ride.
