Abstract (en)

[origin: WO2014095230A1] The invention relates to a method and a device for producing a data page (17) for a book-like document (12), particularly a book-like value document or security document, that comprises a data carrier (24) and a flexible strip material (26) arranged thereon as a flap (23), according to which method: the flexible strip material (26) is fed by a feeding device (33) to a gripping device (34) which is arranged in a receiving position (71) in the loading region (48) of the feeding device (33); after receiving the flexible strip material (26), the gripping device (34) is transferred out of the loading region (48) into a working space (50) and is associated with the data carrier (24) positioned therein, such that an edge region (27) of the flexible strip material (26) covers an edge region (25) of the data carrier (24) and an overlap region (28) is formed; the flexible strip material (26) and the data carrier (24) are undetachably connected to one another at least in portions in the overlap region (28); and the gripping device (34) is subsequently returned from the working space (50) to the receiving position (71) in the loading region (48).
