Abstract (en)  
[origin: WO2014090824A1] A consumer package containing a fabric treatment fluid, the fluid (i) having a viscosity in the range 200 - 1500 @ 21 s and (ii) comprising a volatile benefit agent and a thickening polymer and wherein the consumer package comprises (i) a reservoir containing the fluid (ii) a dispensing outlet located in an uppermost portion of the package such that the package can be tipped by the consumer to dispense the fluid via the dispensing outlet (iii) a neck region adjacent the dispensing outlet, the neck region comprising a mixing chamber adjacent and in fluid communication with the dispensing outlet and a weir member substantially bifurcating the neck region to define two discrete channels from the reservoir to the mixing chamber thereby providing, in a tipped orientation, a weir for disruption of the flow of the fluid from the reservoir to the dispensing outlet, characterized in that the mixing chamber has an upwardly curved upper wall and curved side walls and the ratio of the mixing chamber depth and channel width is in the range 1 :1.5 to 1 :4 and preferably 1 : 1.5 to 1 :2.
