Abstract (en)

[origin: WO2014090507A1] The invention concerns a discharge device for simultaneously discharging at least two flowable components of a multicomponent compound from different storage volumes (10, 11), with a passive mixer unit (12) which comprises a central mixing channel (13) extending in a direction of flow (14) in order to guide the components mixed with each other. The device further comprises at least two inlets (15, 16, 18) which open into the central mixing channel (13), the inlets (15, 16, 18) opening into said channel at different points in the direction of flow (14).
