Abstract (en)

[origin: WO2014091169A1] The present invention relates to a device for activating a wall-mounted cistern (5), comprising a surround (19; 46, 49) for fixing to a wall, at least one vertical push-button (6, 6') articulated to the surround (19) for moving a longitudinal rod (17) that actuates a system (10) for filling/emptying the cistern (5) and said rod (17). The surround (19; 46, 49) defines a recess (22) in which the push-button (6, 6') moves, the recess (22) comprising a peripheral edge (20; 49) to which an airtight and moisture-permeable film (38) that closes off the recess (22) is hermetically fixed, the film (38) comprising a through-hole (39) through which said rod (17) passes so as to be able to operate the cistern (5).
