Abstract (en)
[origin: WO2014086808A1] Frames for drainage channels or manholes are known on which a cover of a channel or of a manhole can be placed. The frame has a horizontal bearing face (10) extending in a longitudinal direction of the drainage channel or of the manhole and, substantially perpendicular to this bearing face, a frame border (11) on the inner face (12) of which the cover can be placed and on the outer face (13) of which a surface covering can be applied. To increase the strength, it is proposed that the bearing face (10) and/or the inner face (12) and/or the outer face (13) is/are provided with beads (20, 22, 23) over the entire length of the frame (1).
