Abstract (en)

[origin: WO2014090742A1] The invention relates to a household refrigeration device (1) comprising a heat-insulating liner (3) which defines at least one coolable storage chamber (4) for the goods to be cooled, a cooling device for cooling the storage chamber (4), a door leaf (5) which is rotatably mounted with respect to the inner container (3) for opening and closing the storage chamber (4), said door leaf having an inner wall (6) with several snap-in detents (8), and at least one door shelf (9) which is mounted on the inner wall (6) of the door leaf (5) on the snap-in detents (8) such that the height can be adjusted, said door shelf comprising, on two opposite end sections, a counter snap-in detent (10a, 10b) which is moved in a spring-like manner in an adjusting direction (V) and is placed in a locked position, engaging in a positive fit in the snap-in detents (8). Said snap-in detents (8) and the counter snap-in detents (10a, 10b) have corresponding upper wall sections (17, 18) which extend at least essentially on a horizontal plane and corresponding lower wall sections (19, 20) which extend at least essentially on a plane inclined in the locking direction (V).
