Abstract (en)

[origin: WO2014090956A1] The invention relates to a solar module for generating electrical current, which comprises a solar cell assembly (3) accommodated in a frame and at least one connection element for a mechanical and electrical connection. At least two connection elements are arranged on at least two sides of the frame (2), wherein a first connection element (4) is arranged on a first side and a second connection element (5) is arranged on a second side, and said connection elements (4, 5) each comprise two contact elements (24, 13; 25, 15), which are isolated from one another and connected to the solar cell assembly (3). The first connection element (4) and the second connection element (5) have complementary shaped elements for an electrical and mechanical form-fitting connection with corresponding further solar modules.
