Abstract (en)

[origin: US2014164571A1] Aspects of the subject matter described herein relate to offload technology. In aspects, a source offload provider may transfer bulk data to a destination offload provider even if the offload providers are different and independent from each other and have no prior knowledge of each other. In preparation for transferring bulk data, trust may be extended to the offload providers. After authentication, the offload providers may transfer all or a portion of the bulk data over a secure channel without the data traversing the initiator of the transfer.
