Abstract (en)

[origin: EP2933004A1] A climbing structure to be used in a playground for children comprising at least three subunits whereof at least one subunit being a climbing subunit. The climbing subunit comprises a pillar with an upper and a lower part, and platforms with holes along at least a part of the platform edge. The upper part of the pillar comprises a first set of fastening means to fasten a series of ropes, the lower part comprises a second set of fastening means to fasten a series of ropes, and the series of ropes run through the holes of the platforms from the first set of fastening means to the second set of fastening means. The subunits are connected to at least one other subunit. Thus, the climbing structure has a relatively simple structure which facilitates the manufacturing and installation process.
