Abstract (en)

[origin: WO2014088305A1] Disclosed is a method for controlling a screen door using a train detection sensor array that is arranged along the longitudinal direction of a platform. The method for controlling the screen door includes a first step for allowing the screen door to be opened in a case where a train is not detected by a head portion train detection sensor of the sensor array and the train is detected by at least some of the remaining successive train detection sensors except for the head portion train detection sensor.
