Abstract (en)
[origin: US2014305078A1] A method for packing tubes or cans is proposed which arrive continuously from a production line and are taken over by a transport unit by means of a grouping unit. The transport unit transports the tubes or cans in a desired formation into a retaining hoop of a strapping unit, wherein the retaining hoop is able to grip the formation in a pincer-like movement, whereupon the formation is strapped using a plastic band and transported further. The transport is achieved by means of two spike plates which are used alternately.
