Abstract (en)
[origin: CN105019755A] The present invention relates to an output shaft (10) for a door actuator (120), a door actuator (120) and a method for changing a possible installation position of the door actuator (120). The output shaft (10) includes an output tray (20) comprising a first (24) and a second front (26) which are opposite about a rotation axis (11) of the output shaft (10). The output shaft (10) effectively connects with a lever arm (121) of the door actuator (120), and the output tray (20) effectively connects with a dashpot and/or a drive of the door actuator (120). The door actuator (120) includes the output shaft (10), the lever arm (121), and the dashpot and/or the drive, wherein the lever arm (121) effectively connects with the output shaft (10) and the output shaft (10) effectively connects with the dashpot and/or the drive.
