Abstract (en)
[origin: CN104989250A] The present invention relates to gap seal device for sealing a gap between a door frame and a door leaf or a gap between two door leaves. Te gap seal device includes a fixed strip, a seal strip comprising a fixed portion and a seal portion, a mounting groove for mounting the seal strip, and a house; the fixed portion of the seal strip is inserted into the mounting groove of a built-in strip, and the built-in strip positioned in the fixed strip is mounted on a door close face of a door, and can be parallellly pushed forward. The gap seal device allows the gap between a door frame and a door leaf or a gap between two door leaves to be sealed permanently, effectively and completely avoid the influence of door leaf torque and bump deformation of the door.
