Abstract (en)

[origin: EP2933551A1] A lighting device includes at least one strip-like carrier member (10, 14) carrying electrically powered light radiation sources (12), e.g. LED sources, wherein said at least one carrier member (10, 14) includes magnetically attractive formations (16, 18) along the length of the at least one strip-like carrier member (10, 14). The lighting device can therefore be mounted on a magnetically attractable support structure, such as a metal plate, so that the lighting device is retained on the support structure (S) by the magnetic attraction force.
