Abstract (en)
[origin: WO2014095379A1] The sports jacket has a closable cooling opening (2) in the underarm area (1) of each sleeve. These cooling openings (2) are arranged in the underarm area (1) of the sleeves on the side that is intended to face the inner side of the underarm. The cooling openings (2) are each equipped with a zip, by means of which said openings can be opened and closed. On the inner side of the openings, the openings each have a window, which is formed in the interior lining (7) of the sleeve and is covered with an air-permeable textile material (4). The window can be enclosed by an elastic profile made of plastic or spring steel, which holds the window open in the relaxed state, or by an elastic profile on each side, which two profiles, in cooperation with a rotary closure (5) that is installed in the window, hold the window open in the relaxed state. The ends of the window are then drawn together by actuating the rotary closure. The window and the air-permeable textile material (4) thereof, and thus the effective cooling opening (2), is tensioned to the outside by the resulting curvature of the profiles.
