Abstract (en)

[origin: WO2014098667A1] The present invention relates to a package of web material for hygiene products, for use in a dispenser, comprising: a stack (1) comprising web material (2, 3) being folded about transverse folding lines (4), thereby providing panels having a length (L) along said folding lines, and a width (W) perpendicular to said folding lines, said panels being piled on top of each other to form a height (H) of said stack, such that said stack outlines a rectangular parallelepiped having said length (L), width (W) and height (H), and forming six outer surfaces, namely -a top and a bottom surface(5,6), being parallel to the panels of said stack (1), -two side surfaces (7,8), comprising the longitudinal edges of the web material (2,3), and -a front and a back surface (9,10), comprising the folded edges of the web material, and a wrapper (14) extending at least over said height direction (H), so as to maintain the integrity of the stack (1) during transport and storage thereof. The wrapper (14) comprises an opening feature for predetermined opening of the package, and said package is configured to be openable such that the wrapper (14) is removable from the integrity of the stack (1) while the stack (1) is resting on an outer surface (10) thereof.
