Abstract (en)

[origin: WO2014096197A1] The invention relates in general to a suction element for the therapeutic treatment of a wound on the human or animal body using negative pressure. In particular, the invention relate to a suction element for the therapeutic treatment of a wound, the surface of which comprises a sensitive tissue structure, said structure lying deeply in an uninjured body, such as a tendon or a bone for example, using negative pressure.
