Abstract (en)

[origin: WO2014095371A1] The invention relates to a method for winding a metal strip (1) onto a reel with a winding mandrel (2), to which the metal strip (1) is routed through a pair consisting of a first and a second driver roller (5, 6), at least one of which is driven. The method is characterised in that a difference between the strip speed (vB) of the metal strip (1) and the speed (v5, v6) of the driver rollers is adjusted on the basis of measuring, from measurable process variables, the strip speed and the speed (v5, v6) of at least one of the driver rollers (5, 6).
