Abstract (en)

[origin: EP2746409A1] Method for heat treating manganese steel product involves annealing a steel product at primary holding temperature of more than 780[deg] C for a period of time, cooling, then annealing at secondary holding temperature of 630-660[deg] C for period of time, and cooling. The alloy of manganese steel product contains 0.09-0.15 wt.% carbon and 3.5-10 wt.% manganese. An independent claim is included for manganese steel product.
