Abstract (en)  
[origin: WO2014102158A1] A unitary household appliance mineral wool insulation panel comprises a mineral wool insulation mat which, prior to installation in a household appliance, has at least two bands, each band having a width of at least 20cm, and in which: a) the said bands have a difference in thickness of at least 5mm; and/or b) the said bands have a difference in density of at least 10 kg/m<sup>3</sup>. The variable thickness and/or density of the bands, whose dimensions preferably correspond to sides of the household appliance to be insulation, allow optimisation in respect of performance and material usage.
