Abstract (en)
[origin: WO2014098569A2] A reinforced earth structure is constructed from several earth-retaining layers. When applying the layers, anchoring elements (5) are fitted between the layers. Cladding elements (6) are attached to these anchoring elements (5), with, preferably, there being adjusting means (7) between the anchoring means (5) and the cladding elements (6) and a cavity (8) preferably having been formed between a cladding element and the anchoring means.
