Abstract (en)
[origin: WO2014121879A1] The invention relates to a structural element for the formation of a floor and/or wall covering having a decorative layer comprising at least one decorative element (4) and having a carrier layer connected to the decorative layer and provided for bearing on the floor or the wall. According to the invention, the carrier layer (13) has a cast material solidified in a moulding space (1), which forms the carrier layer (13), with direct attachment to the decorative layer. In a method for producing such a structural element, the at least one decorative element (4) is arranged in a mould adjoining a moulding space (1) forming the carrier layer (13), and a cast material which solidifies with attachment of the carrier layer (13) to the at least one decorative element (5) is introduced into the moulding space (1).
