Abstract (en)

[origin: WO2014096073A1] The subject of the invention is a blast containment device characterized in that it comprises a dry curtain (3, 27) of dimensions greater than the dimensions of a discharge area to be contained, formed by an opening in a building, such as a door for example, said curtain deploying in response to a pressure wave emitted by an explosion. Advantageously, the curtain (3, 27) is contained in a casing (1, 26) and released from the casing and deployed in response to the pressure wave emitted by the explosion.
