Abstract (en)  
[origin: WO2014096661A1] The invention relates to a coolant-supplying flange for a component to be cooled, especially an exhaust gas recirculation valve, said flange comprising a centring drum (3) in a duct (4) for the circulation of said coolant in said component, said drum (3) extending in an axial direction, said drum (3) being crossed by a channel (6) for the circulation of said coolant, extending in said axial direction, said drum (3) having at least one passage (13) allowing a transverse circulation of the fluid between said circulation duct (4) of the component and said circulation channel (6) of said flange.
